We all know that the rates of children being diagnosed with Autism and Dyslexia are on the rise. In fact, this past year it was discovered that 1 in 66 children are diagnosed with Autism and 15-20% of children have a reading disability. Many parents who are interested in Montessori methods of learning often wonder how Montessori can fit with their children with special needs. The overall picture given to how children with Autism and Dyslexia function in the world and in the classroom is very helpful for teachers and parents wanting to assist these children in a Montessori environment. She mentions a ton of information from Temple Grandin as well as references to things Maria Montessori has stated about the Montessori environment. This disparity in autism awareness and access to services emphasizes the need for a cohesive global autism plan, he said. We can begin to compare the environmental factors at fault if we don’t know the true rates of urban and rural autism prevalence across the globe, and that begins with educating parents and removing the public stigma of autism. If the world had a uniform way of diagnosing autism, and each country had the resources to do so, we could consider the global environmental factors that drive the epidemic. Without it, we are left wondering if Poland is doing something right th
