
Contents:
- Preface
- I. Fundamentals
  - 1. Objects, classes, and instances
  - 2. Subclasses
  - 3. Datatypes
  - 4. Menus
  - 5. The architecture of an application
  - 6. Debugging and building
- II. User interface
  - 1. Windows
  - 2. Buttons and StaticTexts
  - 3. Menus in windows
  - 4. Drag-and-drop
  - 5. Time
  - 6. Sound
  - 7. Movies
  - 8. Game animation
  - 9. Printing
  - 10. TCP/IP communications
- Appendices: Version differences
- Index

Contents:
- Editor's note
- Preface
- Introduction
  - 1. The client-side search engine
  - 2. The online test
  - 3. The interactive slideshow
  - 4. The multiple search engine interface
  - 5. ImageMachine
  - 6. Implementing JavaScript source files
  - 7. Cookie-based user preferences
  - 8. Shopping bag
  - 9. Cookies in JavaScript
  - 10. Cyber greetings
  - 11. Context-sensitive help
- Appendices: A. JavaScript reference
- Index

Contents:
- Preface and acknowledgments
- I. Dialogical emergence
  - 1. Novelty and dogma
  - 2. Matrix theory in flux
  - 3. Quantum philosophy in flux
  - 4. The dialogical emergency of Heisenberg's uncertainty paper
  - 5. The polyphony of Bohr's complementarity
  - 6. The challenge of Einstein-Podolsky-Rosen and the two voices of Bohr's response
- II. Rhetorical consolidation
  - 7. The Copenhagen interpretation and the rhetoric of antirealism
  - 8. The Copenhagen dogma: The rhetoric of finality and inevitability
  - 9. Constructing the orthodox narrative
  - 10. Constructing the orthodox narrative
  - 11. Hero worship, construction of paradigms, and opposition
  - 12. Dialogues or paradigms?
  - 13. Dialogical philosophy and historiography
- Index

Contents:
- Preface
- Common acronyms
- I. Economic forecasting
  - 1. Economic forecasting
  - 2. Forecast failure
  - 3. Deterministic shifts
  - 4. Other sources
  - 5. Differencing
  - 6. Intercept corrections
  - 7. Modeling consumers' expenditure
  - 8. A small UK money model
  - 9. Co-breaking
  - 10. Modeling shifts
  - 11. Wage-price model
- Appendices: A. Running Scheme
- Glossary
- Subject index

Contents:
- Preface
- To the instructor
- Acknowledgments
- I. Introduction: Functions
  - 1. Showing off Scheme
  - 2. Functions
  - 3. Expressions
  - 4. Defining your own procedures
  - 5. Words and sentences
  - 6. True and false
  - 7. Variables
  - 8. Functions as data
  - 9. Lambda
  - 10. Toggling Bridge hands
  - 11. Example: Tic-Tac-Toe
  - 12. How recursion works
  - 13. Common patterns in recursive procedures
  - 14. Spelling names of huge numbers
  - 15. Advanced recursion
  - 16. Pattern matcher
  - 17. Lists
  - 18. Trees
  - 19. Higher-order functions
  - 20. Input and output
  - 21. Example: The Functions program
- Appendices: A. Running Scheme
- C. Scheme initialization file
- D. GNU General Public License
- Alphabetical table of Scheme primitives
- General index
Model 266HSH Gauge Model 266NSH Absolute. Engineered solutions for all applications Measurement made easy. Base accuracy ± from 0.06 % of calibrated span (optional 0.04 %). Best-in-class battery life up to 10 years @ 32 s update time in-field replaceable. New TTG (Through-The-Glass) keypad technology allows quick and easy local configuration without opening the cover, even in explosion proof environments. Model 266HSH Gauge Model 266NSH Absolute. Functional Specifications.
