Edible Landscaping

SPRING SYMPOSIUM

March 18, 2017
9 a.m. to 3:30 p.m.

Join us as we learn to incorporate edible plants into the home landscape.

Presenters

Rosalind Creasy
Celebrated author, lecturer, photographer, and landscape designer Rosalind Creasy has a passion for beautiful vegetables and ecologically sensitive gardening. Her first book, *The Complete Book of Edible Landscaping*, is considered a classic and coined the term “Edible Landscaping.”

Lisa Hilgenberg
Horticulturist at the Chicago Botanic Garden’s 4-acre Fruit & Vegetable Garden, Lisa designs three seasons’ worth of vegetable display beds and manages two orchards of apples and stone fruits. She is a contributor to WBBM/CBS Chicago radio.

Mark Dwyer
Director of Horticulture at Rotary Botanical Gardens for the past 18 years, Mark directs the continued maintenance and improvement of this 20-acre botanical resource. His true passion is obtaining, growing, observing and photographing all manner of plants.

Edible landscaping and gardening is simply using fruit trees and other edible plants to decorate your garden. Edible landscaping has a number of benefits, the big obvious one is saving money on groceries, since most of the plants used are edible so you won’t need to buy as much food from the grocery store. #gardening #sustainable #piwakawakavalley.

Borage Plant & Borage Uses | HealthyGreenSavvy. Borage plant is an easy-to-grow edible and medicinal herb that attracts pollinators and tolerates poor soils. Edibles like fruit and nut trees, herbs, and perennial vegetables take a lot of work to get started. However, unlike an annual vegetable garden that will require daily tending, setting up perennial edible landscaping only need occasional maintenance once established.

4 Reasons to Invest in Perennial Edible Landscaping. Reason 1: Reap the Rewards for Years to Come. Fruit tree varieties grown on dwarfing rootstock can begin bearing fruit 1-3 years after planting and can keep on producing for 15 years.
