University of Wisconsin Medical School. Grand Rounds, Department of Psychiatry.

Cooper Hospital/University Medical Center. Grand Rounds, Department of Psychiatry.

Department of Medicine, Sinai Samaritan Medical Center. “Delirium in the Critical Care Setting.” Milwaukee, Wisconsin. October 18, 1990.

1998-2007: Numerous talks to lay audiences on mental health related topics.

Barry Blackwell
December 4, 2014
Patients in the intervention group showed significant improvements in systolic BP (SBP; mean 134.5 mm Hg, SD 15.5 mm Hg vs mean 140.7 mm Hg, SD 15.2 mm Hg; P=.001), medication adherence (mean 7.4, SD 1.2 vs mean 7.0, SD 1.3; P=.04), and knowledge about hypertension (mean 6.3, SD 0.9 vs mean 5.9, SD 1.2; P=.004) compared with those in the control group. 

Maria Sergeevna Soboleva, Ekaterina Efimovna Loskutova

The present study examined habitual CRAE over 1 year in a similar population, and systolic BP was significantly lower in the CRAE group compared to the SED group (Figure 2B). Many patients with frailty can be assessed and managed in the primary care setting through a network of support, which may include family, caregivers, and community care providers. Polypharmacy is common in patients with frailty. Consider the benefits and harms of medications by conducting a medication review in all patients with frailty. Develop a care plan using the areas of geriatric assessment outlined in Appendix B: Sample Care Plan Template as a guide. Share the care plan with the patient and/or family/caregivers/representatives, and with other key care providers. Initiate advance care planning discussions for patients with frailty or vulnerable to frailty.
