Anne & Steeno

JITED is a peer-reviewed journal, focuses on international economics, economic development and, more importantly, the interface between trade and development. The links between trade and development economics are critical at a time when both fluctuating commodity prices and trade liberalisation and agreements can radically affect the economies of developing countries.

JITED aims to meet the needs of international and development economists, economic historians, applied economists and policy makers. The international experts who make up the journal's Editorial Board encourage contributions from economists worldwide.

Submission of a paper to the journal will be taken to imply that it presents original, unpublished work not under consideration for publication elsewhere. By submitting a manuscript, the author grants the right to the editors to make any alterations to the original text is strongly discouraged.

Page proofs will be sent for correction to a first-named author unless otherwise requested. All proofs should be returned within three days of receipt. Correspondence concerning proofs should be addressed to the Editor of the journal.

References published in the same year, add lower case letters.

Footnotes should be used only where necessary to avoid interrupting the continuity of the text. They should be num-

bered consecutively using superscript Arabic numerals. They should appear at the end of the main text, immediate-

ly before the list of references.

I enrolled as an international economics and trade student in ZUSTR from 2009-2013. The school happened to be a good ground where I study all that is needed to be equipped for a better future. They combined both foreign and local professors from all sort of life into the school and today I am happy and proud to be an old student of ZUST. After graduation it was not difficult for me to find a good job. I am currently the director of international talent people in Alibaba based company called Tianxiaren Company limited and we deal in human resourcing management. Kenneth Kumah Yao Dogbey (Ghanaia How did international trade and globalization change over time? What is the structure today? And what is its impact? Is globalization an engine of economic development? an overview of the main arguments linking globalization and economic development. Trade has changed the world economy. Trade has grown remarkably over the last century. If trade is causally linked to economic growth, we would expect that trade liberalization episodes also lead to firms becoming more productive in the medium, and even short run. There is evidence suggesting this is often the case. Pavcnik (2002) examined the effects of liberalized trade on plant productivity in the case of Chile, during the late 1970s and early 1980s. The International trade and economics is also called International business and trade or International economy and trade. Program seeks to develop capabilities for sustainable and competitive managerial decision making. Continuous globalization processes of domestic economies have led to a situation where firms must face and comprehend the impact from global production and trade networks. International markets are in constant flux as the global business environment changes with political and economic developments. Companies need to stay on top of who their competition is, who is purchasing their products, and where the opportunities for growth are.
